Lab 3 Benchmarking Results CSC326 – Group 24

Lab 2 Benchmarking Results:

Maximum number of connections that can be handled by the server before any connection drops: 1000

Maximum number of requests per second (RPS) that can be sustained by the server when operating with maximum number of connections: 213.34 requests/sec

Average and 99 percentile of response time or latency per request: 204 ms (average) and 350 ms (99 percentile)

Lab 3 Benchmarking Results:

Maximum number of connections that can be handled by the server before any connection drops: 1000

Maximum number of requests per second (RPS) that can be sustained by the server when operating with maximum number of connections: 384.02 requests/sec

Average and 99 percentile of response time or latency per request: 83 ms (average) and 312 ms (99 percentile)

Explanation:

The lab 3 benchmarking results are better than the lab 2 benchmarking results because the maximum number of requests per second (RPS) that can be sustained by the server when operating with maximum number of connections has increased to 384.02 requests/sec and the average and 99 percentile of response time decreased to 83 ms and 312 ms, respectively. This means that the search engine performance has improved and that it is faster than it was in lab 2. This could have happened because static pagination was used in lab 3. Static pagination reduces excessive processing time to display the first result page because only a limited number of results are displayed on each page.

Command:

ab -n 1000 -c 50 http://54.161.255.192:80/?keywords=csc326+ece

Output:

This is ApacheBench, Version 2.3 <\$Revision: 1826891 \$> Copyright 1996 Adam Twiss, Zeus Technology Ltd, http://www.zeustech.net/Licensed to The Apache Software Foundation, http://www.apache.org/
